

VTC FLUSH

The test of time has proven that water supply in a poultry shed has greatly improved water's sanitary qualities; though it has not eliminated the risk of disease challenges. Enclosed systems provide no visual reminder that mineral deposits and slime are a problem.

Secondly, live production doesn't have a true appreciation for the versatility of waterborne microbes given the perfect environment of a slow moving and nutrient filled water supply. Again biofilms is the big challenge that keeps on challenging.

World of water organisms is complex and resilient. The challenge won't go away without a strong plan of attack

Doing Right Things in Right Way is Key to Success.

Composition:

- Blend of selected Organic acids (Acetic acid, Citric acid, Sulphamic acid Formic acid) and Inorganic acids (Ortho-phosphoric acid).

Salient Features

- Descaler, removes mineral deposits, junk and slime from water lines and cooling pads.
- Phosphate free, citrated, biodegradable.
- Non staining and safe.
- Non corrosive (no oxidizing acids & chlorine)
- Economical dilution – 2.5 to 5% for descaling of water lines.
- Ideal for cleaning and descaling nipple waterers.
- Cleaning and descaling cooling pads.
- Removes biofilms.

Dosage:

Cleaning & Descaling of water lines : 25ml per ltr. water

Cooling pads : 25ml per ltr. water

A. I. Tips : Dip for 30 mins & rinse

**Packing
1 Ltr.
&
5 Ltrs. Jar**
